Blacks Bluff Ala. March. 22 1839

My Dear Sir

I have now resumed my bottanical studies and commenced making collections. The vegitation is a whole quite different from that of the north. Here grows the splendid Magnolia grandiflora, besides several other species. Also the Pinus taeda — palustris and pungens. Evergreens are common so that the woods have a green appearance during winter. The species of Smilax are very numerous and several of them evergreens The oaks form a very numerous class. With several evergreen trees I am unacquainted nor can I determine them till they bloom. Here are all varieties of soil from the rich river bottom to the dry sandy pine barrens. Not far from this are pine barens of many miles in extent in which civilization has not molested natures productions. These will afford a rich field to the botanist and in all probability they have never been explored by one. Corn is now up in this region and apple and peach trees are in bloom indeed vegitation is about as forward here as it is at the north in the month of may. But I am in lat 32°. where snow is seldom seen

Last fall when at Tuscumbia in the northern part of this State I explored many caves and obtained a splendid collection of Calcareous minerals. Among which are large crystals of Arragonite & the greatest variety of Calc. Spar I have ever seen. The caves had never been explored before and hence afforded a rich harvest. I know the specimens are superior to any thing generally found in cabinets. I have several large well filled boxes. Well do you wish to exchange for such minerals? I have forgotten the extent of, or how your Society Cabinet appears. If you wish to exchange I will send a box to your order next fall. I also obtained a fine collections of Shells from the Muscle Shoals of the Tennessee river. Please inform Dr Brown that he may expect a box of Shells from me next Autumn and that I wish to obtain more from him. This is a tertiary formation and the rock contains many Shells. will Specimens of these be acceptable? I can easily send things via Mobile but to what house in St Louis should they be directed. I.E. to whose care? I wish you would remember me in your bottanical excursions and let me come in for a share of the spoils. Such plants as you think are not common at the East will be acceptable. More of the Draba caroliniana. The Batschia longifolia and several others of which you gave me specimens last autumn are wanted. I wish you would write me soon. Direct to Blacks Bluff. Wilcox County Alabama. The first No. of Torreys and Grays American Flora was published last July. It will be published in numbers and comprise 3 vol.s of about six hundred pages each. It will be the best work on American botany. He adopts the natural system. But you have doubtless seen the work ere this

Yours truly

Dear Sir

I was at Mobile a few days ago and shiped a package of plants for you in a box directed to Professor Quernick. Also a few shells for Dr. B. B. Brown. You will please inform him for I have not time to write him. Not having visited Tuscumbia this fall where most of my minerals and shells are I cannot send any minerals and but few shells. I have engaged to teach in this place the present year. & shall have a vacation of six weeks next summer when I intend to visit the Northern and mountainous parts of this State especially Tuscumbia and the Muscle Shoals. Then I will send you ~~a box~~ and Dr Brown a box of minerals and shells. In the mean time I wish that you and the Dr would save for me a suite of all the shells that you find. Any plants that you have for me please direct them to me care of Dr Torrey No 30. Mc Dougal St. N.Y. I would suppose ~~that~~ you could send ~~send~~ them by some merchant. I do not want them sent by public conveyance and if no private opportunity offers please keep them for me till sent or called for. You mention in your letter that a friend of yours is engaged in collecting in Texas another towards the Rocky Mts plants from either of those places will be very acceptable. Mr Duerinck will probably furnish me with most of those growing in the vicinity of St Louis. Have your European plants arrived? Should there be among the plants sent you any ~~that~~ you desire to obtain more specimens of please name them and I will endeavor to get them for you next season I wish you would write to me as soon as you recieve your package

Direct to Allenton Wilcox Co. Ala.

Yours truly

My Dear Sir

I have just recd a letter from Mr Duerinck requesting me to send his plants to Cincinnatti Ohio, I had intended to have sent you a package with his had he remained in St Louis. I am unacquainted with any commission merchant in St. Louis to whom I can direct a package. When at Tuscumbia in the northern part of this State a few weeks since I directed a box of minerals for the St. Louis Nat. His. Society to you care of Andrew Buchanan who was formerly comission merchant at St. Louis but I could not acertain whether or not he continues the business. If you wish me to send you a package I wish you would write and let me know how to direct. I can send you a greater variety than last year and many things that you probably have never seen. I am sorry that ~~that~~ the package I sent you last year was lost. I do not wish you to send me any thing till a year from this fall when I intend to return to N. York. Through Dr Torrey I learnt that you had returned from Europe filled bottanical zeal and blessed with a wife. The Shells that accompany the box of minerals are for Dr. B. B. Brown to whom give my best respects

and tell him I should be glad to hear from him and continue to exchange specimens. I have lately visited the Alabama river & gathered a large quantity of shells a suite of which I will send to Dr. Brown in your box of plants. Mr Duerinck informs me that he has collected largely the past season. I hope he will reserve some for me. Have not time to write a long letter. Please write immediately because I wish to send away all packages next month if possible.

Yours truly

Dear Sir

Answered Feb. 12th

Little more than a week since I sent a package of plants to you in a box directed to J. B. Duerinck Cincinnati. Sycamore St Catholic Atheneum. I have written to Mr Duerinck to keep them for you till sent for, or untill he has an opportunity of transmitting them safely to you. The box was sent via Mobile to the care of Mr Kernion of N. Orleans. I wish to obtain in exchange the rare plants in the neighborhood of St. Louis and other parts of the far west. Also plants from Germany or other parts of Europe will be acceptable. Should there be in the package sent any plants of which you wish to obtain more specimens please write the number and I will endeavor to send them. I shall remain in this place another year. The plants that you may send me please direct them to the care of Dr. Torrey N. Y. No 30. McDougal St

Yours

S. B. Buckley

Did you receive the box of Minerals and Shells which I sent you last fall? They were sent from Tuscumbia Ala. to the care of Andrew Buchanan St Louis. The shells are for Dr. Brown.

Allenton Wilcox Co. Ala. March 10. 1841

Dear Sir

Last week I recd a letter from you from which it appears that you have not recd the boxes which I sent you At the same time I recd a letter from Mr Duerrick stating the box is probably lost which contained a package for you. It went safly to their agent Mr Kernion of New Orleans who shipped it on board the William French a Steamer bound for Louisville and Cincinnati. The boat went no farther than Louisville. As soon as Mr Duernk learnt that the boat would not come to Cincinnati the agent of the boat at Louisville was written to and requested to forward the box to Cincinnati The agent replied that he had recd no such box from the Wm French, nor any box whatever and that the box would have been left at his store if it had been on board the boat. If Mr. Kernion took a bill of lading as he certainly ought to have done you may yet get the package. I begin to think there is little dependance to be placed in the Miss. boats. I was informed at Tuscumbia that Mr Buchanan was a commission merchant at St Louis and therefore had the box of minerals directed to him. I requested Dr. Prout who is a professor in the New Medical college at St Louis to take charge of the box and have it shipped with his things but he refused. I think he is a little souled man having seen a little of his meanness while exploring caves in the vicinity of Tuscumbia. Had he much of the gentleman with a very little trouble on his part you would have recd the box of Minerals and shells which I left with a commission merchant with directions to send at the first opportunity.

I can safely send you a box as far as New Orleans being acquainted with some of the Commission Merchants of Mobile. Hence the box I send you will be apt to be recd. I cannot indemnify you for the loss of the minerals and shells from the Muscle Shoals next fall, nor send you plants from North Car. & Georgia. but I can send you shells from the Ala. river and the woods. (and most of the Tennessee river shells are found in the Ala.) also many southern plants embracing some new species which are peculiar to this section. You may expect to receive a box from me next fall of plants and shells Do you wish to obtain duplicates?

Dr. Short has lost so many packages that were sent him by way of New Orleans that he requested me to send his packages to N.Y. or

Philadelphia. I sent a box to him & Dr. Darlington directed to Philadelphia Sent a large box to Dr Torrey and others that has arrived safely Having sent most of My specimens to N. York I cannot send you any thing till next fall. When I return to N. Y. which will be next year I can send you many things from different parts of the United States Those with whom I exchange send the specimens for me to N. Y. so that I have few things here Mr. Curtis of N. Carolina has promised to send me specimens from the South Atlantic States. & Prof. Carpenter of Louisiana has sent me many from his region and will send me more so that I shall have a large supply of Southern species which I will cheerfully share with you. In the mean time I wish you to furnish me with as many different species of European plants as possible. and keep them in reserve till next year. Have commenced herborizing and have some 8 or 10 species in press among them is a new species of Thalictrum. It is small, procumbent rarely over 6 inches height. Anemone caroliniana. Tipularia discolor. Draba brachycarpa are among the number I sent you a catalogue of Willows published by Dr. Barratt Did you receive it? Shall be glad to receive frequent letters from you

Yours truly
S. B. Buckley

Perhaps you had better inform one of the street and no. of
the Messrs Kolligs of N. O.

Tell Dr. Brown I will send him as many species of shells as possible

Allenton Wilcox Co. Ala. Sep. 3. 1841

Dear Sir

A few days ago I received your letter acknowledging the receipt of the supposed lost boxes of Minerals. My stay at Tuscumbia was necessarily short because business called me here. I was obliged to take the stage monday morning early or else wait till wednesday so in order to start monday morning on Sunday I placed the few shells which I got the preceding day from the Shoals in, the boxes & left directions with the Commission merchant to mark & send them, consequently I am not culpable for not marking the boxes with a large and full direction; but the Commission merchant in whose charge they were left. The minerals are from caves in the vicinity of Tuscumbia & the fossils from the same region. The box of plants which I sent last fall to you and Mr Duerinck was marked with large and full letters so that it could not have miscaried for want of a suitable direction. I have sent numerous packages to various parts of the United States and Europe and none were lost except as they went on the Missippi! Year before last I sent a box to Prof. Short of Louisville Ky. via N. Orleans and it was lost. Last winter I sent him one via Philadelphia & it went safe. It is not possible for me to send you a package of plants till next December. at which time I will start one to you. I intend to visit New Orleans next winter and will take it with me and deliver it to your friends so as to be sure ~~as~~ have it go safe that far. You have had such repeated disapointments that it is best to try and prevent them for the future. I will send some shells to Dr. Brown. Please send the plants that you have for me to the care of Dr. Torry N. Y. No. 30. Mc Dougal St, care of Carey & Co. No. 90. Pine St. N. Y. Possibly you might send them by private conveyance with some of your friends if you can that will be much the safer way I should like to have them reach N. Y. some time between ~~now~~ this and next Aug. Duplicates of the rare plants about St Louis will be acceptable such as Batschia longiflora. Draba — ? not caroliniana and many others I intend to start for Europe in a year from this fall and I wish to take plants with me. Your foreign plants will be acceptable. In return I shall be able to furnish you with many of the species peculiar to the South having a correspondence with Mr. Curtis of N. Carolina, Dr. Chapman of Florida & Prof. Carpenter of Louisiana all zealous botanists as you will see by refering to Torrey's & Grays Flora. I believe Mr. Duerink has discontinued his bottanical pursuits. I have not heard from him since last Spring. You ask me to pay some attention to the genus vitis. I have collected several species both in flower and fruit of which you shall have specimens.

I have found part of a skeleton of the great fossil Saurian, Basilosaurus 44 vertebrae measuring 50 feet in length! only 3 of the tail and 2 of the neck vertebrae were found. I have also broken fragments of ribs and leg bones. The bones obtained made two heavy waggon loads for two yoke of oxen! Could the entire animal be found he would beat the farfamed Missourian as to size!

I shall not remain here any longer than till next December. and will devote next summer entirely to the business of travelling and collecting expect to collect among the mountains of Tennessee North Carolina and Virginia

Yours truly
S. B. Buckley

My Dear Sir

You have probably long since recd a package of plants from me through messrs Kohns of N. O. A plant labeled Laurus new? is Hopea tinctoria, No. 1. I think is Ionidium, Another number is Brunichia cir. I believe I know the names of most of those numbered. Having yearly sent all my collections to N. York I could not send you as many species as if I had been in possession of my herbarium Last year the waters of our rivers and streams were so high that I could not procure any shells worth sending to Dr. B. I hope to be more fortunate during the coming season. As soon as the roads will admit I shall start for North Carolina and Tenn. for the purpose of spending the summer among the Mts. of those States collecting specimens of which you may expect to receive a share. I have been engaged most of the present winter in getting fossil remains Shells &c. — have obtained a large portion of Harlans Basilosaurus or Owens Zygodon embracing all the vertebrae excepting a few of the cervical & a large portion of the head. The specimen is nearly 70 ft long! Some of the vertebrae are a foot in diameter at the end & much more measuring through the middle where the processes are. I have

S. B. Buckley
Blacks Bluff Alab.

1842
March 8th

sent it to N. York where it will remain in boxes till I return probably some time next Sept.

I wish you would send me as many duplicates of the rarer plants of your vicinity as you can spare. I intend to start for Europe next November and wish to take out specimens. Perhaps you can give me letters to some of your scientific friends there. If so you will confer a great favor. I intend to be there about 2 years and shall visit a large portion of the continent. If you please to give me any such letters direct them to West Dresden Yates Co. N. Y. when I shall be next October. In the mean time please write to me directing to Asheville, North Carolina when I expect to be next May or by the first of June. I am anxious to hear from you

Yours truly

My Dear Sir

I did not leave the Mountains of Carolina till about the middle of Sept & then returned here through Virginia, Maryland Penn. & N. J. During the Summer I obtained one new genus and several new species which I intend to publish as soon as I can arrange & describe them. I hardly think they will be published till the Springs Number of Silliman's Journal is issued as I wish to publish in that work & have not time to prepare them for the next Number. I rec.t a package from you through Dr. Gray. It did not contain as many indigenous plants as I wish. Foreign are not in great demand among our Botanists In your letter directed to Ashville N. C. you say that you have collected an extra number of Specimens for me of the rare plants of your vicinity such as Draba brachycarpa Androsace occd. Cardamine ludov. & others that you will Send them to me this fall. These I have not rec.d You also promised to give me letters of introduction to Some of your Scientific Correspondents in Europe. These you could send in the package containg plants. In return for these things I will send you a package containg many rare things peculiar to the Southern country &

especially to the mountainous portion of it. I have several cuscutas for you collected in the mountains of Car. Yesterday I rec^{d} a letter from Curtis of N. C. He has sent a paper to Silliman to be published in the next number of that Journal describing about a dozen new species of plants most of which I collected specimens of last summer. I visited Curtis at Hillsboro on my way home

I have concluded to delay my departure for Europe till the Spring & spend the winter in this city board in a French family & learn to speak French, tend lectures and arrange my collections in Nat. His. Two or three days ago I examined a collection of plants which Torrey ~~he~~ has recently rec^{d} from the Rocky Mts. They were collected by a French officer belonging to the U. S. A. mostly about the sources of the Platte river a region little known to the botanist. I tend Dr. Torrey's lectures on chemistry. I have read your monograph on Cuscutae. Any package that you may send me direct to the care of Carey & Co. No. 90. Pine St. N. Y. ~~or to me at the~~ & write so that I may know when to expect it

Yours truly

My Dear Sir

I received your letter dated Sep. last in due season. I had just arrived from an excursion into the interior of East Florida which I left in August on account of sickness and owing to that my excursions & collections there were rather limited. I have upwards of 100 species of rare or undescribed plants and most of them peculiar to that region of which I can furnish you specimens hoping to receive Texan or the plants of the far West in exchange. I have not yet received the plants which you sent for me to the care of Carey Ho. N.Y. but suppose they are there. I expected to have spent the winter in N.Y. city but shall remain here devoting leisure moments to the arrangement of my herbarium & study. Have you heard from those collecting in the Region of the Rocky Mts. & if so what success did they have in getting specimens?

My Dear Sir

I have delayed answering your last letter till now hoping to receive the package of Texan Plants which you wrote as having forwarded to me but I have hoped in vain the package has not arrived nor is there any prospect of its arriving at this place. I have written and sent several times to Wiley & Putnam who state that no such package has been recd by them. I regret this much because I have so few Texan Plants not more than twenty which I obtained of Riddell at New Orleans Have you any way of replacing the loss? I have not yet distributed my Florida plants my health having been poor a portion of the Spring & Summer besides I have a large farm to superintend however my labels are printed & most of the plants are named & I will forward a package to you without fail this fall Shall I send it to New York as you last directed? I hope you will still endeavor to send me some Texan plants when I remind you that of those which I have received from you very few were new to me I having previously obtained most of them when at the West & South

I have not obtained a copy of the Natural history of the State of New York for myself the distribution of the copies having been among politicians chiefly and those who have little use for such works but

Strove to obtain them on account of their great cheapness I fear that Torreys & Grays Flora will not be completed Gray as you are probably aware being engaged at a great work on the Genera of North American plants to be completed in 8 or 10 vols with plates illustrating each genus I have subscribed for the work. I should like to obtain the grasses of your vicinity especially the more common ones found on the prairies with notes as to their range & use to the farmer will you send me them?

Yours truly

Dear Dr. Engelmann

I arrived from Texas here to day & found your letter. I found Texas much richer in trees & shrubs which are new to me than I expected & have concluded to spend the summer there with Dr. Shumard the State Geologist We shall visit the Counties North of Austin which I think have been little explored by the botanist. I visited Dr. Lindheimer at New Braunfels a few days ago He has devoted little attention to botany, he says for the last eight years. I will endeavor to fulfill your request with regard to Cacti Euphorbiae Cuscutae &c. of which Texas may yet have some that are new Thus you see I have put off the trip to California

MISSOURI BOTANICAL GARDEN
copyright reserved

which I hope to be able to visit next year. I accept with pleasure your proposal with regard to Emory's Report which I am very anxious to obtain.

There is an oak here which has acorns & leaves exactly like Q. coccinea as figured in Michaux's Sylva hence the figures of its acorns have not been misplaced as suggested by Gray in the New Edition of his Manual - however I suspect that tinctoria & coccinea are the same as you suggested to me last June I have found leaves & acorns on the same tree which agree with the figures of both as given by Michaux

Yours very truly
S. B. Buckley

I should like to hear from you again, the papers which you directed to me at this place have not been recd & I would like to have you send others to me at Austin Texas care of Dr. B. F. Shumard
